

The way Medicine ignores CardioRetinometry®!

I was annoyed that Prof T.Y. Wong failed to answer any of my responses to his "Rapid Response to Wong" In British Medical Journal 23 July 2004 and 26 Nov 2004 <http://www.survivediabetes.com/Essay/BushLetters.html> So here is a photographic "Rapid Response" to Prof. Wong

Blockages in the 1st Left Hand images are seen to be disappearing in the second (Right hand) images in both pairs below.

Thousands of images like these in my database impressed 90% of my patients who wanted to write testimonials.

I was astonished to learn from every forum of Optometry that my colleagues lacked the ability (or the will) to see these changes and was subject to much mocking and "They look the same." The fact that 1% is an important change with a bad prognosis for a long life if it is allowed to continue was wasted on them. Doctors of Medical Osteopathy who are more Orthomolecular, are expected to seize the opportunity to qualify in the science and gain massive life extension of up to 50% for their patients where my colleagues in Optometry, with the exception of Prof Stuart Richer OD.,MS.,FAAO.,PhD have been convinced, as well as the celebrated nutritionist, leader of the Vitamin C Expert Committee and broadcaster author of many books Bill Sardi, and Dr Dorie Erickson BS.MS.PhD (Nutr) PhD(Edu)CNC.
